

Enhances performance of fungicide sprays

HAND OFFTM

Fungicide Activator

- Spreads spray droplets upon contact to maximize coverage of target surfaces
- Reduces wash-off from rain or irrigation
- Slows drying time to enhance fungicide activity

Hand Off™ is an adjuvant designed to augment the performance of systemic and contact fungicides while extending disease control. Hand Off™ provides superior spray coverage and deposition characteristics. It assists the fungicide in sticking to the leaf surface.

- Superior emulsion of tank mix partners
 - Disperses fungicide actives throughout the spray
- Lower surface tension of tank mix allows spray droplets to spread upon contact
 - Increased spreading ensures contact fungicides protect more of the plant surface
 - Allows water to penetrate plant surfaces, aiding delivery of systemic fungicide actives
- Includes humectants to slow drying time
 - Slows drying time for extended contact protection and increased systemic uptake

Available In:
Quart Bottles
1 Gallon Jugs

IDEAL FOR

- Golf courses, sports fields and commercial or residential lawns
- Sensitive turf grasses such as greens or tee boxes

HOW IT WORKS

Contact fungicides protect plants only where the spray is deposited and only for as long as the fungicide remains on the surface of the protected plants. Similarly, systemic fungicides require time to be taken up into the plant before they evaporate or are washed off

- Coverage Properties - The superior emulsion and lower surface tension properties ensure that each spray droplet contains pesticide actives that hit the intended target
- Optimal Performance - Once spray droplets hit the target, solutions containing Hand Off™ spread quickly to maximize the surface area of the plant covered while slowing the time it takes for the solution to dry. This combination allows extended protection by contact actives and increases uptake of systemic actives

HOW TO USE

- Spray with confidence after reducing the chance for cross contamination by cleaning equipment with Onside Kick™
- Add directly into the tank during the mixing process
- Fill the tank to 3/4 of the desired level with water and add actives, adjuvants and an anti-foaming agent like Reverse™ as needed and turn on agitation. Finish filling tank with water to desired level and add Hand Off™ at the recommended use rate.
- If the user does not have experience with tank mixtures including Hand Off™, run a small scale phytotoxicity test before application
- For maximum efficacy, add after any wettable powders or other solid formulations have been thoroughly dispersed

RECOMMENDED USE RATES

All Fungicides

1 pint per 100 gallons of spray mix

QUALITY ASSURANCE

Exacto® products are manufactured with pride at our production facility in Sharon, Wisconsin. Each batch is inspected by our Quality Assurance Team to ensure it meets our high standards.
