# AquiMax<sup>®</sup> Broadacre

Soil Moisture Management

AquiMax<sup>®</sup> Broadacre is an injectable soil amendment that can increase plant-available water and improve soil moisture uniformity. For the first time, a moisture-retaining polymer has been formulated with a soil surfactant in a stable micro-emulsion that can be injected directly into drip and micro-jet sprinkler irrigation systems. The surfactant carries the moisture-retaining polymer into the root zone, where it provides more plant-available water throughout the growing season. AquiMax<sup>®</sup> Broadacre is a unique soil amendment unlike anything else on the market and gives dry edible bean growers a valuable tool for managing soil moisture.

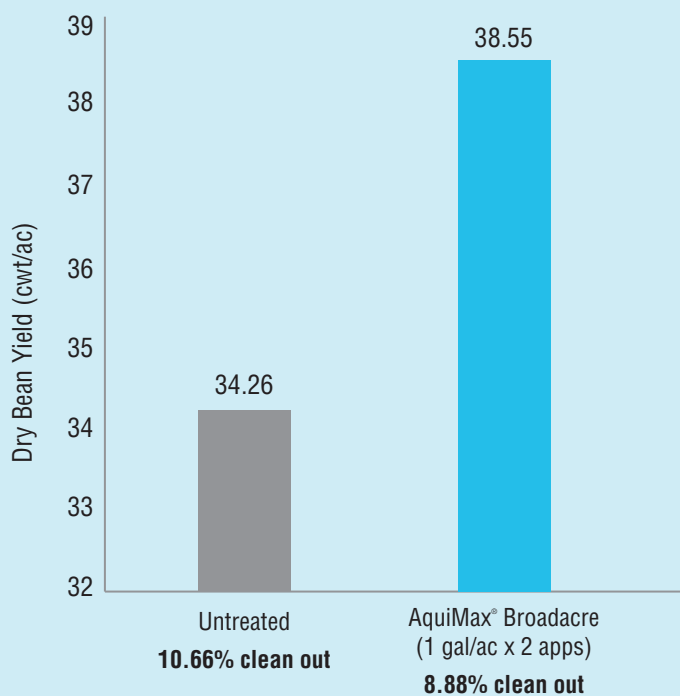

## Dry Edible Beans

200 Old Factory Road  
Sharon, WI  
262-883-8112

## Aquimax® Broadacre Improved Edible Bean Yield by 12.5%

Center Pivot-Irrigated Dry Edible Beans in Sandy Loam, 2017  
Moses Lake, WA  
80 acres treated/80 acres untreated

Untreated  
36 pods/plant  
More yellowing; Maturing more quickly

Aquimax® Broadacre  
46 pods/plant  
Delayed maturity

Untreated  
Lower leaves firing-off  
Newest pods limp and aborting

Aquimax® Broadacre  
Thicker stem diameter  
Newest pods healthy
