

Improved Herbicide Efficacy and Extended Weed Control

INLAY™

Deposition Aid

INLAY™ is a deposition aid that improves pre- and post-emergence pesticide and nutrient applications. By positively affecting the wetting and deposition characteristics of the spray solution, INLAY delivers a more even and uniform application, delivering:

- Enhanced pesticide efficacy.
- Greater success in applications made before and during the season.
- Flexibility for use in all crop and non-crop applications.

INLAY™

INLAY™ is formulated with a superior surfactant system and paraffinic oil to improve deposition and penetration of the active ingredient into the target surface. **INLAY** promotes efficacy by improving soil deposition, which can help to reduce run-off and leaching of the spray application. Tests with various pesticides have proven that adding **INLAY** to the spray solution improves weed control better than pesticide alone, delivering flexibility and better performance.

- Keeps pre- and post-emergence herbicides in the target area for extended weed control.
- Improves spray deposition providing even coverage.
- Provides better performance and flexibility for pesticide and nutrient programs.
- No plant back restrictions.

IDEAL FOR

- Any pre- and post-emergence pesticide and nutrient tank mixes.
- When extended herbicide control is needed.
- Recommended for use in all crop and non-crop applications.

HOW IT WORKS

Pesticides and nutrients can only be effective if they reach the targeted location and stay in place for as long as needed. **INLAY** is formulated with a superior surfactant system and paraffinic oil that improves deposition and penetration of the active ingredient into the target surface. **INLAY** promotes efficacy by improving soil deposition, which can help to reduce run-off and leaching of the spray application.

HOW TO USE

For maximum efficacy, add **INLAY** with agitation as the last ingredient after any wettable powders or other solid formulations have been thoroughly dispersed.

RECOMMENDED USE RATE

2-4 pints/100 gal at a recommended spray volume of 1-2 gallons of carrier water per 1000 square feet.

Small volume equipment: 0.5 to 1 ounce per gallon of solution

Available In:
1 Gallon Jug
2.5 Gallon Jug

QUALITY ASSURANCE

Exacto® products are manufactured with pride at our production facility in Sharon, Wisconsin. Each batch is inspected by our Quality Assurance Team to ensure it meets our high standards.
